Material Selection

Feasibility & Viability

Technical & Material Feasibility

Game Board Base

Material Direction. MDF / Hardboard

3–5 mm board thickness → gives the board rigidity and keeps it portable.

Sheet material → I can find it easily which helps with quick prototyping.

Laser/CNC compatible → this lets me cut the board precisely after I finish the design.

Surface treatment

This will hold graphics, lamination and designs that feel like textiles.

Modular & adaptable → I can change board size and parts while I prototype and improve.

Expected lifespan: the board should last through games if maintained properly

IMPACT AND BENEFITS

Educational institutions: It makes history , the culture, economy and traditional patterns easy to learn for the players through a 20-minute board game.

Artisan Ecosystems: It creates an opportunity for local artisans to make the game piece by providing them extra income and jobs.

Cultural preservation: It keeps the traditional works, weaving terminology, and community heritage alive and it introduces younger generations the knowledge about weaving and the process behind it.

Zero E-waste: The game requires no batteries, screens or electronics. It is eco-friendly and can be made with sustainable materials so, the game creates a more nature friendly way of learning and creates no harm .
